CRACKSEALING

Thank you for your interest in *SIDELINE Asphalt Sealing* services.

CRACKSEALING uses an adhesive sealant to fill cracks to prevent moisture and other substances from entering the crack, and making the crack larger.

Timing is Everything

Unfortunately, cracks in your asphalt over time will come. Your choice will be to let them go and grow larger, take care of them while they're small, or re-pave your driveway or parking area with a fresh coat of asphalt. The most cost-effective way is CRACKSEALING.

Think of the cracks in your asphalt as a sickness. The longer they go without treatment, the more damage they will cause. Taking care of cracks when they are small, prevents larger, more expensive treatment in the future.

CRACKSEALING is Not a Permanent Solution

- CRACKSEALING preserves your asphalt to keep it functional, so you don't have to undergo more extensive repairs.
- Cracks will re-emerge due to constant exposure to the sun, rain, snow, and changes in temperature.
- The sealant in the cracks will not be level with your asphalt surface. It will take a few weeks for the sealant to settle into place as it cools.
- Because CRACKSEALING is of a different and darker substance than the sealcoat, you will be able to see the difference after it has been freshly sealed.

Is Your Asphalt Calling Out for Its Cracks to Be Filled?
